Environmental footprint

material
LCA

The online library to access environmental yarn footprint data of E. Miroglio yarns.

The project consists of mapping and measuring the environmental impact of each yarn in order to ensure transparency to our customers and demonstrate the company's commitment to mitigating its environmental impact. Collaborating with SBP and using its platform allows us to correctly calculate the "Environmental Footprint" and share the data with Brands.

(LCA)

Life Cycle Assessment (LCA)

LCA is a methodology used to assess the environmental impact of a product during its entire life cycle. The methodology applied follows the guidelines of the PEF (Product Environmental Footprint) and takes into consideration the production and transport phases up to the customer gate.
